ABOUT THIS PIECE

Lesson plan: addition strategies

Katherine Conklin

WHAT IT IS

A 1-on-1 resource-room math lesson for a 5th grader working at a 1st-grade level, using the Doubles, Make 10, and Use 9 strategies. Written for class and used with students.

WHAT TO LOOK FOR

How the lesson builds from a warm-up to independent practice.

Lesson plan: Addition strategies

Doubles, Make 10, Use 9 · Katherine Conklin

Grade level: 5th (working at a 1st-grade math level) **Setting:** 1-on-1 resource room **Subject:** Mathematics **Duration:** 25–30 minutes

Objective

The student will apply addition strategies (Doubles, Make 10, Use 9) to solve single-digit addition problems and identify which strategy was used.

Materials

- Addition strategies worksheet
- Dry-erase board and markers
- Manipulatives (counters, number line)
- Visual anchor chart or strategy cards

Warm-up (5 minutes)

A quick flashcard session with three problems (for example 5+5, 9+4, 8+2). The student names the strategy that could be used for each problem, with praise and scaffolding as needed.

Mini-lesson (7–10 minutes)

Introduce or review the three key strategies, each modeled with visual supports and manipulatives. The student helps solve a second example for each using a number line or counters.

- **Doubles:** 4+4, 6+6
- **Make 10:** 7+3, 8+2
- **Use 9:** 9+3 becomes 10+2

Independent practice (10–12 minutes)

The student completes a worksheet of addition problems that lend themselves to the three strategies, solving each one and circling the strategy used. The teacher provides support and scaffolding as needed.

Closure (5 minutes)

Review the strategies used and ask the student to reflect on which was easiest and which needs more practice. Two or three new problems serve as an independent quick check for understanding.

Accommodations used

- 1-on-1 instruction
- Visual aids and anchor charts
- Extra time for processing and task completion
- Strategy prompts available during work time
- Immediate and specific positive reinforcement
